

Access

Secure Remote Access: SSL VPN

Access for Business Partners, **Access** for Vendors, **Access** for Mobile Workers, **Access** for Consultants, and Access to real time corporate resources make managing your communications over the internet critical in today's information driven worldwide market. VirtualArmor's team of experts will turn your **Access** into **Competitive Advantage**.

Today the widespread availability of broadband Internet access connections, high speed mobile networks, wireless LAN hot spot services and smart handheld devices has driven many workers and your business partners out of traditional office to home offices, to field deployment with direct customer facing opportunities to help solve your customer problems. Providing secure access to corporate resources has grown into a requirement for the Enterprise and the Small to Medium Size "SME" business sectors. Those companies that have moved quickly to incorporate these communications, utilizing the flexibility of SSL VPN deployment, are enjoying the competitive advantage and market leadership positions.

The use of Secure Socket Layer "SSL" VPN's is ideal for many of your current network communications needs because:

- ◆ SSL VPNs do not require a client download onto the device being used to access corporate resources.
- ◆ SSL VPNs do not need to be configured by the end user.
- ◆ SSL is available wherever there is a standard Web browser, so users do not need a company provided laptop, workstation or other handheld devices.

VirtualArmor will team with your Staff utilizing our unique software suite of products to support you VPN initiative 24/7/365. If your business and the needs of your partners are local or Worldwide, VirtualArmor will be there to deliver the support you need to stay competitive in the markets you serve.

Contact VirtualArmor today to see how we can help you increase your Competitive Advantage.
